

Proofs that the One and Only God exists

If you don't have enough time to read the entire paper, please focus on the section titles and the conclusion, as they contain important information. I wrote this paper as an attempt to protect myself from **neuroweapon attacks** (V2K - voice to skull weapons, RNM - remote neural monitoring, DEW - directed energy attacks, remote AI based mind control tech). I simply wanted those harassers and terrorists to read this short, manually written paper so that they understand that God exists and that, by committing such crimes, they are only destroying their own future. More information about these modern types of remote torture, that tens of thousands of us are going through, is available at this website (including a lot of documentaries):

<https://streetviewlance.com/nanobots/>

1. Creation of the Universe

The Universe was created as infinite at some moment in the past out of nothing. Higgs bozon is a hoax. The Universe is infinite, because what would be outside of it? It would be empty space and maybe some matter, and they are part of the Universe, which means that the Universe was created as infinite. Galaxies are moving away from each other faster and faster, so if they existed since forever we would not be able to see them by now. All of that implies that it all started finite time long ago, out of nothing. Who can create out of nothing? Hint: The One and Only God. Every reaction requires certain action, and if reaction is creation of the whole Universe, Who would be able to apply such an action force to create all of that matter and energy?

Effects of dark matter are not caused by gravitational waves of Big Bang explosion of some black hole, otherwise there would be additional gravitational force applied on us and on all stars and galaxies, which is not something that is happening. Also all (or almost all) galaxies and stars would move in the similar direction instead of moving away from each other. How do we know that it is not happening? For example you can use accelerometer to measure vector of gravitational force on each point around Earth, and it is similar (almost same). Very distant galaxies and stars would be distorted by that additional force of gravitational wave(s). The only reasonable explanation is that Universe was created out of nothing finite time long ago and space is being created/added between galaxies, so they are moving away from each other faster and faster.

2. Gravity

If there was 4th spacial dimension regarding Moon orbiting around Earth, parts of Moon's kinetic energy would go under the surface, but that is not what is going on because it would make friction and Moon would lose kinetic energy and fall on Earth long time ago. Even if the energy goes under the surface into the 4th dimation, that would mean the 4th dimension is not just a surface and it would mean that it would be possible to have multiple 3D objects at the same place at the same time which is highly unlikely.

Huge energy is needed to apply force on planets to make them follow orbit path, but that energy is somehow not available in the space-time continuum so we can not use it to produce close to infinite energy. Planets need to be moved away from a straight path in order to move along an orbit and that requires huge amounts of energy. That energy does emerge on orbits with a shape of elipse when a planet or moon is closer to the center of orbit, so a planet or moon is getting more kinetic energy, but then it loses it again and the process repeats. We can not use that energy to produce

power because if we do (theoretically), the planet or Moon would lose speed and hit the space object that it is orbiting around. So, there is a peripetuum mobile, but its energy is not usable to us.

There is a rule that existence of mass causes an invisible Actor to apply force on each and every piece of mass around it towards it. According to monotheistic religion, some meleks/angels (Mikail/Michael) are in charge of gravity, so it is result of them applying force. Some scientists think gravity can be explained with Riemann manifold, which is a distortion of 3D space around matter. However in case of Riemann manifold the problem is that it does not explain force that acts towards the center of mass. A simple distortion would not cause that force. Energy is needed for that, but where is it coming from? Who do you think that Actor is, that can move planets and stars out of their straight path and apply such a huge force during such a long time, and at the same time hide energy needed for that from this world?

3. Predetermined Timeline

Current moment has infinitesimal length and everything is determined by the One and Only God, but we feel free like we have a choice to choose next actions. Timeline is moving forward and scanning what is already predetermined: future becomes past, but is not changeable. It is Qader.

4. Perfect Design in Biology

Blood veins and arteries usually don't have any holes while being formed and while babies are being created, otherwise they would die because of internal bleeding, which is a sign of the perfect design and the One and Only God's existence. Seeds can grow into big trees. People can not make robots grow and form like that and convert organic food into such amounts of energy needed for sustenance of life.

5. Consciousness and Feeling

Probably most impressive proof about existence of the One and Only God is the fact that people can not make any robot to feel anything. Just imagine that electrochemical and physical processes are happening in the body, and ask yourself how would you make that compilation to feel anything, which means that those are processes of unliving nature, so how to make unliving nature to really 'see', 'hear', 'taste', 'feel'?

6. Unexplained Magnetic and Electrical Forces

It is not explained how magnets can create a force even with distance between them, it is not explained how nor why the magnetic field transfers through space, nor why the amount of force is not bigger or smaller.

Watch this video: Richard Feynman, Magnets https://www.youtube.com/watch?v=MO0r930Sn_8 pay attention to last part where he says that he can not explain it in terms of anything else that listener would be more familiar with, because he does not know it in terms of anything else that he would be familiar with.

7. Light and Vision

Photon is probably both: particle and a wave, there are experiments that prove it. Electromagnetic waves move at speed of light. Our eyes are incredibly precise in differentiating between wavelengths of light, so we can see colors very well with healthy eyes even though speed of light is enormous: about 300 million m/s. It is all sign of the perfect design created by the One and Only God.

8. Animal Instincts

Animals act on instincts and they don't have reasoning, they just do things. How do birds know how to build nests, how to feed their young, how to navigate long distances and return to the same place and there was no one to teach them, except the One and Only God. Humans are given reasoning ability by the God and that makes us different than any other living beings in the world.

9. Organic Food Chain

If things could happen by themselves, most of living beings on Earth would be eating rocks or sand. Those are only solid things that would be available on Earth for first living beings to eat, however at least 99.99% of living beings (or 100%) get energy by eating organic material. There are some very rare worms that eat rocks, but scientists believe that they don't get almost any energy by doing so, so it would not be enough to sustain life. That means that life on Earth was created by the One and Only God.

10. Complexity of Life

In order for a living being to appear by coincidence it would have to be able to: eat, breathe, multiply, maybe move, generate energy and convert food into its body parts. However, since it would be the only living being on the Planet it would not have any organic material to eat. Let's assume it is an animal, it would require oxygen O_2 to breathe and some other living being(s) as food. The ecosystem would die out very soon, unless if it is at least as big as a country (estimation) because all oxygen on the Planet would be converted into CO_2 very soon and also there would be no other living being(s) that it would be able to eat.

11. Fine-Tuned Universe

If any of poisonous gasses (like O_3 , methane and other) in the atmosphere were heavier than mixture of O_2 and CO_2 , living beings would die. Also if Earth was a little bit closer or further from Sun, living beings would die.

12. Mysterious Forces

Relation of gravitational force and electromagnetic forces is not known at all. Electromagnetic forces don't cause 3D space and time curvature, otherwise other objects would be also affected by those forces. That is contrary to gravity which affects all matter.

13. Infinitesimal and Infinite

Space and time consist of cells of infinitesimal lengths. For example usually between any 2 points there is infinite number of points, but each point has length of 0, so the total length between 2 points should be 0, but it's not (obviously). Which means that space and time consist of infinitesimal lengths which are bigger than 0, but infinitesimally small. That is what dx is in integrals. Who would think that such thing exists, it is like the number 0.000(Infinite number of zeros)1 or some other additional digit(s) instead of digit 1 there. It is very strange that such lengths exist in space-time.

Let say that there is a line of finite length n^* from point A to point B, and in the middle of it there is the point 0. If we scale that line into a line m^* of infinite length, all points left of 0 on line n^* that are not infinitesimal would be mirrored into points that are on m^* at infinite distance left of point 0. Analogy applies to the right side of those lines. When it comes to points that are infinitesimally close to point 0 on line n^* left of point 0, they would be mirrored into points that are on m^* at finite distance left of point 0. Analogy applies to the right side of lines. We can compare this to the fact that Universe is infinite in both: big and small. By looking at both: finite line n^* and its mirror: infinite

line m^* , we can conclude that there are many more points on infinite line m^* that are at infinite distance from point 0, than those points that are at finite distance from point 0. There is actually a line between finite and infinite numbers. Left of that line is largest finite number, and right of that line is smallest infinite number. This means also that there is not only one INF number, there is infinite number of infinite numbers. Point A from finite line n^* would mirror itself into the point $-INF$ on line m^* , which is smallest infinite number. Point B from finite line n^* would mirror itself into the point $+INF$ on line m^* , which is biggest infinite number.

Number of infinite and infinitesimal numbers is far far greater than number of finite numbers, and that shows that Universe is infinite in both: big and small. Also, numbers at finite noninfinitesimal distance from zero were mirrored into numbers at infinite distance. That means that some finite numbers from among infinitesimal numbers were mirrored into finite noninfinitesimal numbers, while most of infinitesimal numbers stayed infinitesimal even after mirroring. The reason why it was possible to mirror numbers at finite noninfinitesimal distance from zero into so many infinite numbers is the fact that those numbers consist of: finite numbers with finite number of decimal places, and such numbers with infinitesimal numbers being added/appended to them. There are no points between point 0 and smallest infinitesimal number that is smaller than all others. dx in integrals is not a point, it is any infinitesimal length, even that length between point 0 and smallest infinitesimal number. However that length between 0 and smallest infinitesimal number is actually 0, otherwise there would be more points between them which is not true, meaning there is zero number of points between them. They are successive points, and length between them is zero. However, if it is zero that would mean that they would be exactly same point which is not truth. So, it is truth that that length has magnitude of zero 0, and larger than zero but smaller than any other length $0+$, at the same time. Which means that something can be both: true and false at the same time, which proves that the One and Only God can create even something like that. This applies to all 3 spacial dimensions and the time dimension, and points to the fact that everything was created out of nothing.

Let's define $0+$ space as space that is made of all dots that are at distance of $0+$ around 0. There is omnidirection even at small scale and any other scale, and there is enough number of dots within $0+$ space to form any shape made of finite number of dots. This allows possibility of 'drawing' any shapes of any size through dots in space. A single dot in geometry could be defined in such a way to include $0+$ space around it.

CONCLUSION, ESPECIALLY FOR ATHEISTS

Regarding intelligent atheists, please listen. Ask yourself: how much chance do you give to the existence of the One and Only God taking into account all of these proofs, and additional proofs that you can find chatting with chatgpt, and on the Internet? Is it 1%, 25%, or 35% of chance or more? Well, then that is how much chance there is for burning in hellfire for eternity, according to you, for people who don't believe. Think of it as **dice with finite number of sides where 1 or more sides represent INFINITE DANGER**. Would a smart, sane, adult person dare to throw such dice and try their luck, when there is an infinite danger if you do? Ask AI, it would strongly suggest you to avoid throwing such dice, and guess what: you can avoid throwing such dice, if you accept monotheistic religion!

I'll tell you also that actually the only threat to us is Hellfire! That is the only real danger, all other dangers are only temporary, which means not worthy of serious attention. Logical conclusion for people is to do what they can to avoid that infinite danger! All you need to do is to be religious and

good person. Allah s.v.t. would not leave us without a clue, so He sent messengers to inform us! They are best and most influential people of all time: Muhammed s.a.v.s., Isa a.s. (Isus), Musa a.s. (Moses), Nuh a.s. (Noah), Ibrahim a.s. (Abraham), Adem a.s. (Adam), Davud a.s. (David), Sulejman a.s. (Solomon), Jusuf a.s. (Joseph), Jakub a.s. (Jakob) and others... They are mentioned in Qur'an, and in Bible, and in Torah.

I'll have to mention a few other strong signs that I found. There is a hadith that says: "The Hour (meaning the Judgment Day) will not come before than the river Euphrates dries up...", and please to see this sign check out this video: <https://www.youtube.com/watch?v=Mx9uuuVCWFE>

Another sign you can find on the last slide on my website:

<https://streetviewlance.com/presentation/>

Mecca is exactly at the place of the ratio of the golden mean on the World map, looking both horizontally and vertically, and this ratio is about: 1.618. Do you think it's some HUGE coincidence? People did not have a map like that at the time at which Kaaba was built!

In addition, in Surah Ali-Imran, verse 96, the word Bakkah (meaning Mecca) is found in the position of the golden ratio in that verse, i.e. the verse has a total of 47 letters, out of which 18 are in front of that word, and the number of remaining letters is 29, so $29 / 18 = 1.61$. I counted letters, and it's true. That is exactly optimal position of the word regarding golden mean ratio in that verse!

It is well known that the Universe is expanding. Well, guess what, that is written in Qur'an, the Book from about 1400 years ago! "We built the universe with 'great' might, and We are certainly expanding 'it'." (51:47)

In the end, I will ask one more time: Regarding intelligent atheists, how much chance do you give to existence of the One and Only God taking into account all of these proofs? Is it 25%, or 35% of chance? Then that is how much chance there is for burning in hellfire for eternity for people who don't believe. Are you aware of risk that you are taking? You should be. Believing and obeying (to the God) are directly related to the purpose of life in this world. Now I will mention to you that some of these proofs actually don't have ANY alternative explanation, so you should just accept it.

For the end, think about the following regarding consciousness:

Neural network is just data circulating around, be it digital or analog data (it does not matter, it's just data). It is like domino effects happening, so you could think of it like a bunch of connected routers. Take for example your computer router, if you connect it to a bunch of other routers and let them contain and exchange data, would that scalamery be able to feel anything? If all of that data was not presented to something (the soul of a living being) it would just be domino happening and it would not feel a thing.

In other words, in order to prove that there is no soul, you would need to prove that you actually don't feel anything. If it was like that and people really couldn't feel anything, then even burning in HELL forever would not be a problem (but as we know, it is and a HUGE PROBLEM, in fact an INFINITE PROBLEM, because we have a soul, we are alive and we feel).

Remember the conclusion: We are not robots, we are alive, we feel and we are different than a domino machinery with basic data exchange and data containers.

A few other miracles of the Quran:

The words 'male' and 'female' both appear 23 times in the Quran, knowing that the 23rd chromosome is the primary element that determines an individual's gender. Besides that the total number of human chromosomes is 46; 23 each from the mother and father. Do you think those are also HUGE coincidences?

You know well that the planet Earth has core that is mostly made of iron, right? The core of Earth is around its center. So, ask yourselves what is written in the central part of Holy Qur'an? Qur'an has 114 verses, divided by 2 is 57. Check out what is the name of 57th verse in Qur'an, it is Surah Al-Hadid (The Iron).
